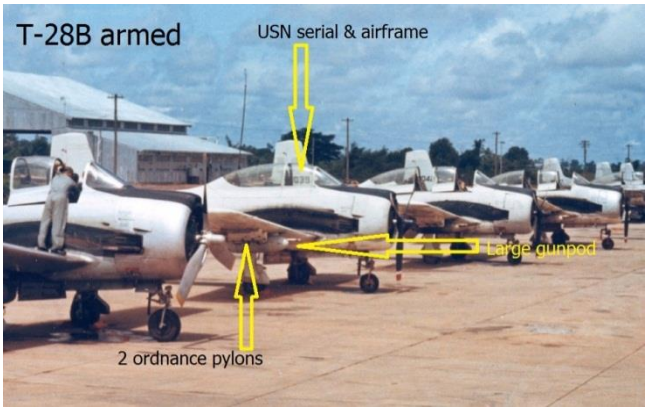
IDENTIFICATION NOTES

These notes are intended to help with identification from photos of the different variants of the T-28. They can however only be a guide, because of the many field mods carried out. Some features, such as the ammunition bay door, can be hard to see in photos.

T-28A Base model with 2-blade propeller; all later models have a 3-blade propeller. No belly speed brake. USAF airframes only.

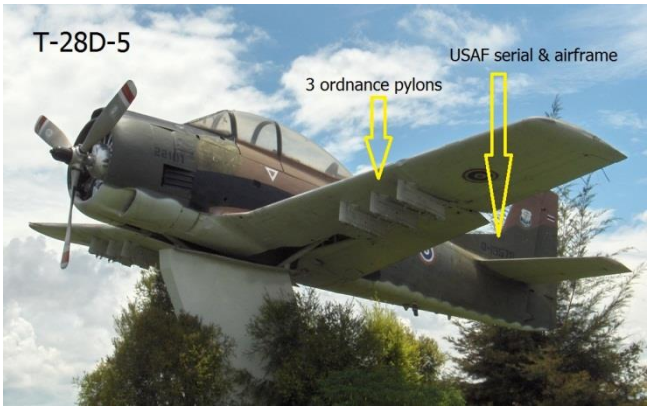
T-28B (armed) 2 pylons plus large gunpod (T-28D type - see below) under each wing. Belly speed brake. USN airframes only.



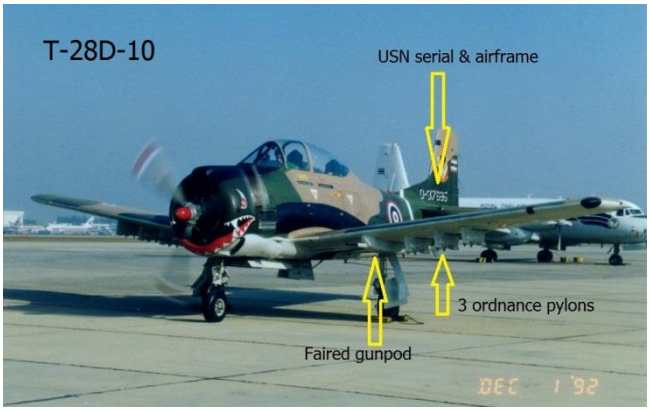
T-28C Arrester hook. Belly speed brake. USN airframes only.

T-28D 2 pylons plus large gunpod (T-28D type - see below) under each wing. No belly speed brake. USAF airframes only.

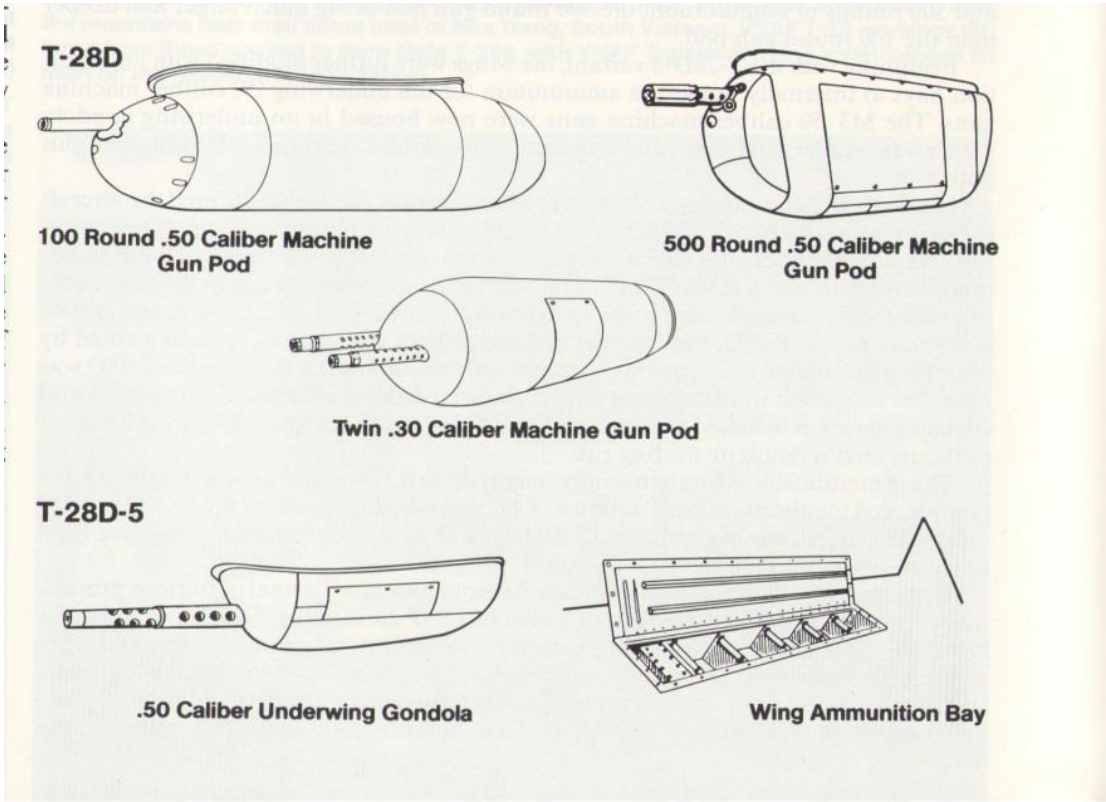
T-28D-5 3 pylons plus faired gunpod (T-28D-5 type - see below) under each wing. Ammunition bay door in wing top surface near leading edge. No belly speed brake. USAF airframes only.



T-28D-10 3 pylons plus faired gunpod (T-28D-5 type - see below) under each wing. Ammunition bay door in wing top surface near leading edge. No belly speed brake. USN airframes only.



Distinguishing between T-28D-5 and T-28D-10 is really only possible if the serial can be read, and therefore it is known if it is a USAF or a USN airframe. The model is also printed in the datablock, just below the left front canopy on the fuselage, but this can rarely be read in a photo.



T-28D/D-5/D-10 MODIFICATION SEQUENCE NUMBERS VS. USAF/USN SERIAL NUMBERS

Note that references to Bob Sikes = Fairchild Crestview

The US civil registrations for T-28A's regained by USAF for the T-28D programme are listed in the table.
